ECOflame® Roadblaster

The Fast and Efficient Solution for a Clean and Dry Road Surface

The ECOflame Roadblaster is specially developed for the pressure cleaning and drying of road surfaces before new road markings are applied. The proven ECOflame burner technique, in combination with a powerful fan unit, results in a high power road surface drier with a capacity of 4,000 meters per hour. Built on the Tichel Trac machinery carrier, it is the most manoeverable and easily transportable Road Surface Dryer combination that in an easy and ergonomical manner can dry long lengths of road quickly and efficiently. With the ECOflame Roadblaster line marking work, also on a wet road surface, can be carried out and lost hours can be considerably reduced.

Technical Specifications Tichel/ECOflame Combination

| | |
|------------------------------------|--|
| total length in operation position | 4.8 m |
| total length in transport position | 3.1 meter |
| working width | 0.3 m |
| track width | 0.95 meter |
| total weight | ca. 700 kg |
| work speed | 1 tot 4 km/h |
| gas consumption | ca. 12 kg/h |
| gastype | propane in vapour phase |
| safety and security | by use of a burner control with flame detection device and electronic gas shut-off valve |
